

Moodslider

by Lydia Chatziioannou

INSTRUCTIONS

1. Unzip the folder.
2. Open the file index.php in a Google Chrome browser.
3. Click 'Upload', in the top left of the screen (see screenshot below).

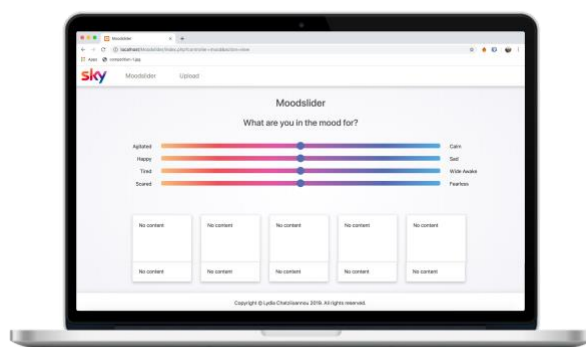

4. Open the folder called 'Test Files' and select the 'all-programmes.xml' file.

HOW IT WORKS

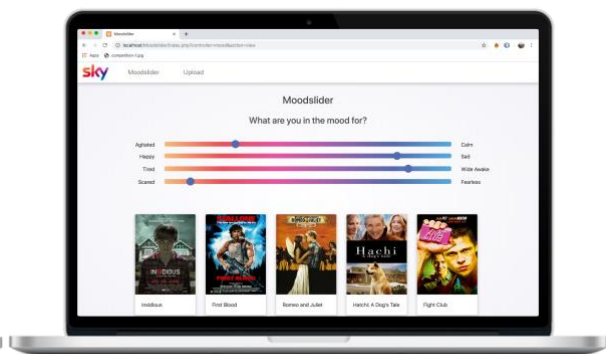

1. The application offers movie recommendations based on the mood the user selects.
2. When selecting multiple sliders (moods), the application provides movie recommendations based on the order of the closest match (e.g. Calm=20, Sad=50 and Tired=40, the movie recommendations will appear in this order: Sad, Tired, Calm.)
3. The application has been tested on all major browsers (Chrome, Safari etc.) but Google Chrome is recommended.
4. The application is mobile responsive (Bootstrap has been utilised for this purpose).
5. Sky's branding have been attempted based on <https://www.sky.com>.

TESTING

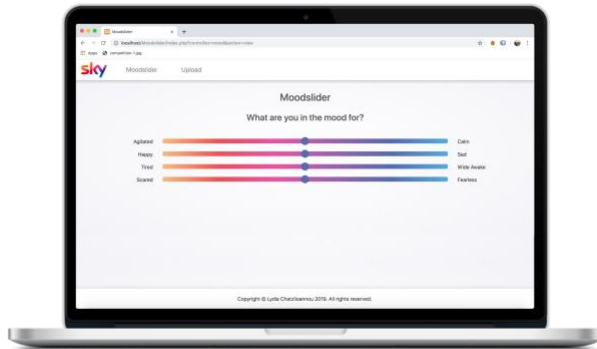

1. The application has been tested with a variety of file types (pdf, jpg, png) and it does not allow them to be uploaded. The only allowed file types are text/xml.
2. The application has been tested with a variety of file sizes and anything over 10MB will not be allowed.
3. The application has been tested with a variety of xml files and data (see screenshots below).
